

Propane tank recycling

Propane fuel tanks are turned in for recycling at GRC. Waste Management de-stems them, and places them in a scrap metal dumpster. Our waste removal company picks up the metal and sends it to the recycler.

If any propane is left in the cylinder, the recycler recaptures it, tries to reclaim it, and sends it to a processor to reuse. Whether or not there is propane remaining in the cylinder, the metal tank is reused or recycled.
